

AED Wall Cabinet Automated External Defibrillator

Aivia 220

Presentation

The AIVIA 220 may be installed indoors or outdoors.

Combining strength and lightness Aivia is composed of two distinct parts:

- The polycarbonate cover
- The ABS base

These materials are well known in the automobile industry, among others, giving excellent shock resistance properties. Polycarbonate is used in vehicle headlights and ABS for bumpers.

Markings

On the front face are shown the survival sequence and three clear pictograms with instructions for use. On the sides are AED (English) and DAE (Latin) separated from the logo for the defibrillator (heart broken by an electric spark).

Aivia 220

Features

Day/night lighting of the AED compartment by leds with automatic luminosity detection.

Defibrillator access is secured by plastic coated seals. Emergency services are called automatically upon opening. The telephone land line supported by the AIVIA must be by analogue type. It may be dedicated or shared.

A visual (flashing red leds) and audible alarm, *optional*, are also triggered on opening.

Heating, *optional*, is connected to a temperature sensor enabling it to be activated when a minimum threshold of 10°C is reached.

A visual alarm using red leds signals abnormalities (temperature out of range, telephone line problem). If it is impossible to connect the AIVIA to a telephone land line, as an *option*, a GSM device identical to a cellular telephone is available.

Location

Mains power (24 volts DC) allows installation of the heating option and thereby enables location outdoors, on the public way, for example.

AED compartment ventilation reduces excessive temperatures in the AED compartment, however in the absence of air conditioning, the AIVIA must be located in shade to avoid heat build-up from direct sunlight.

Dimensions: H = 423 mm, L = 388 mm, P = 201 mm, Weight = 3.5 kg
